

INFRASTRUCTURE CONSTRUCTION

TESTED AND TRUSTED

ERICKSON®

Saving time and money with Erickson aerial solutions

Erickson is the world leader in precision aerial heavy-lift operations. Our S-64 Aircranes can safely carry a capacity of up to 25,000 pounds and possess unique precision placement capabilities, making them the platform of choice for many diverse heavy-lift missions and ideal for infrastructure development.

The S-64 Aircrane features an aft-facing pilot station and a patented anti-rotation rigging system, which allows for the setting of heavy loads with an unmatched degree of safety, precision and production.

We have developed a unique system for transmission line construction that is cost-competitive with conventional ground-based methods. The precision capabilities of the Aircrane, combined with the skill and experience of our pilots and project managers, has allowed for the safe placement of over 10,000 miles of electrical transmission towers worldwide. During our forty years of high precision construction lift helicopter operations, Erickson has never had an accident performing this type of aerial work.

Utilizing the helicopter for transmission tower erection allows contractors to concentrate and maximize labor forces for efficient tower assembly at vastly increased production rates. The speed and efficiency of the Aircrane for flying tower sections along the right of way, and the precision building of towers from the air, separate Erickson from all other helicopter operators and save our customers valuable time and resources.

We utilize our precision aerial construction experience to assist with the placement of materials on many types of large infrastructure projects, ranging from pipelines to hydroelectric projects to wind turbines and mining sites.

Our experienced project teams are ready to assist with the design of powerline and infrastructure systems that integrate our Aircrane lift solutions as effectively as possible.

- Experienced leader in aerial infrastructure construction
- Cost effective and time efficient solutions
- Safe, precise placement
